Subject: Lymphoma section for formaldehyde

Dear Jason and Catherine,

As promised I am providing my review draft of the formaldehyde MOA section. There are 3 tables and references attached that make the draft appear to be larger than it is. I stopped looking at literature today. I have some general language about literature searches in the front. I have not identified just how many references identified from the literature I initially got identified as “mechanistic” via HERO were used here vs. the many I had to get from the NRC literature searches and the many searches I did on specific topics needed to pull this together. The last one was this morning. Perhaps this is an example of how that HERO process does not provide adequate information for mechanistic sections.

Please forward to your assigned reviewers and to the workgroup.

Jane Caldwell
